Designing a Resident-led Intimate Partner Violence (IPV) Screening Program in Trauma Patients

AWS Research Madness

Marisa E. Schwab MD, Hannah Decker MD, Mica Rosser MD, Jane Wang MD, Deborah Stein, MD, MPH, FACS, FCCM, Tasce Bongiovanni MD, MPP, MHS

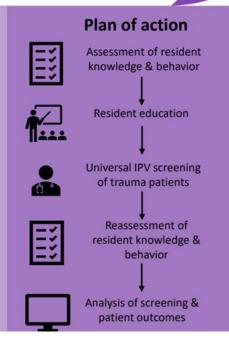

Understanding the Problem

Screening for IPV remains inconsistent despite high prevalence in trauma populations and national recommendations for universal screening

Goal: Increase resident screening for IPV in trauma patients at a single Level 1 Trauma Center

Effective Domestic Violence Curriculum in UME

@BAlchiuji @htjacks

WHO: 1 in 3 women are affected by domestic violence (DV) in their lifetime. Physicians in *every specialty* can and should play a direct role in screening and managing DV

Scopus'

Effective curriculum =

Longitudinal

2. Elicits high studentperceived relevance

Example undergraduate medical education (UME) DV curriculum design:

MS1: relevance lecture/panel

WS2: screening/management skills didactic with standardized patient

(i.e. surgery: how to screen for DV in

trauma H&P)

MS4: DV elective with social worker
